##Importing The ImageDataGenerator Library

import keras

from keras.preprocessing.image import ImageDataGenerator

###Define the parameters/arguments for ImageDataGenerator class

train_datagen=ImageDataGenerator(rescale=1./255,shear_range=0.2,rotation_range=180,zoom_range=0.2,horizontal_flip=True)

test_datagen=ImageDataGenerator(rescale=1./255)

###Applying ImageDataGenerator Functionality to trainset

 $x_train=train_datagen.flow_from_directory(r'C:\archive\Dataset\Dataset\train_set', target_size=(128,128), batch_size=32, class_mode='binary')$

###Applying ImageDataGenerator Functionality to testset

 $x_{\text{test}=\text{test_datagen.flow_from_directory}}(r'C:\archive\Dataset\Dataset\test_set',target_size=(128,128),batch_size=32,class_mode='binary')$

##Import model building libraries

#To Define linear initialization import Sequential

from keras.models import Sequential

#To add layers import Dense

from keras.layers import Dense

#To create Convolution kernel import Convolution 2D

from keras.layers import Convolution2D

#import maxpooling layers

from keras.layers import MaxPooling2D

#import flatten Layer

from keras.layers import Flatten import

warnings

warnings.filterwarnings('ignore')
